Empirical modelling of translation and interpreting Fictional Translators True Islam: Lost in Translation The Routledge Handbook of Translation and Media

The Routledge Encyclopedia of Translation Studies remains the most authoritative reference work for students and scholars interested in engaging with the phenomenon of translation in all its modes and in relation to a wide range of theoretical and methodological traditions. This new edition provides a considerably expanded and updated revision of what appeared as Part I in the first and second editions. Featuring 132 as opposed to the 75 entries in Part I of the second edition, it offers authoritative, critical overviews of additional topics such as authorship, canonization, conquest, cosmopolitanism, crowdsourced translation, dubbing, fan audiovisual translation, genetic criticism, healthcare interpreting, hybridity, intersectionality, legal interpreting, media interpreting, memory, multimodality, nonprofessional interpreting, note-taking, orientalism, paratexts, thick translation, war and world literature. Each entry ends with a set of annotated references for further reading. Entries no longer appearing in this edition, including historical overviews that previously appeared as Part II, are now available online via the Routledge Translation Studies Portal. Designed to support critical reflection, teaching and research within as well as beyond the field of translation studies, this is an invaluable resource for students and scholars of translation, interpreting, literary theory and social theory, among other disciplines. Acclaimed, when it first appeared, as a seminal work – a groundbreaking book that was both informative and highly readable – *Translators through History* is being released in a new edition, substantially revised and expanded by Judith Woodsworth. Translators have played a key role in intellectual exchange through the ages and across borders. This account of how they have contributed to the development of languages, the emergence of literatures, the dissemination of knowledge and the spread of values tells the story of world culture itself. Content has been updated, new elements introduced and recent directions in translation scholarship incorporated, providing fresh insights and a more nuanced view of past events. The bibliography contains over 100 new titles and illustrations have been refreshed and enhanced. An invaluable tool for students, scholars and professionals in the field of translation, the latest version of *Translators through History*

remains a vital resource for researchers in other disciplines and a fascinating read for the wider public. This volume argues for an innovative interdisciplinary approach to the analysis and translation of literary style, based on a mutually supportive combination of traditional close reading and 'distant' reading, involving corpus-linguistic analysis and text-visualisation. The book contextualizes this approach within the broader story of the development of computer-assisted translation -- including machine translation and the use of CAT tools -- and elucidates the ways in which the approach can lead to better informed translations than those based on close reading alone. This study represents the first systematic attempt to use corpus linguistics and text-visualisation in the process of translating individual literary texts, as opposed to comparing and analysing already published originals and their translations. Using the case study of his translation into English of Uruguayan author Mario Benedetti's 1965 novel *Gracias por el Fuego*, Youdale showcases how a close and distant reading approach (CDR) enhances the translator's ability to detect and measure a variety of stylistic features, ranging from sentence length and structure to lexical richness and repetition, both in the source text and in their own draft translation, thus assisting them with the task of revision. The book reflects on the benefits and limitations of a CDR approach, its scalability and broader applicability in translation studies and related disciplines, making this key reading for translators, postgraduate students and scholars in the fields of literary translation, corpus linguistics, corpus stylistics and narratology. Machine translation (MT) is the area of computer science and applied linguistics dealing with the translation of human languages such as English and German. MT on the Internet has become an important tool by providing fast, economical and useful translations. With globalisation and expanding trade, demand for translation is set to grow. *Translation Engines* covers theoretical and practical aspects of MT, both classic and new, including: - Character sets and formatting languages - Translation memory - Linguistic and computational foundations - Basic computational linguistic techniques - Transfer and interlingua MT - Evaluation Software accompanies the text, providing readers with hands on experience of the main algorithms. This book explores the impact of applying computer-assisted (CAT) tools in freelance translation toward better understanding translators' strategies, preferences, and challenges in using new technologies and identifying areas of enhancement in translator training. The volume offers a brief overview of the latest developments in

technology in translation, examining such issues as the effect on the translation process and the dynamics of the translator-technology interaction. Drawing on data from a study with active translators in Poland, Pietrzak and Kornacki examine the underlying factors underpinning translators' lack of engagement with these tools, including such issues as prevailing pre-conceptions around technology and limited knowledge hindering the most efficacious use of these resources and the subsequent impact on translator identity. Taken together, the book brings together these insights to help pinpoint freelance translators' needs more effectively and adapt training programmes accordingly. The volume will be of interest to scholars in translation studies with an interest in process and technology as well as active translators.

Contact between Islam and the West is 1400 years old. Both sides have had more than adequate time to become familiar with the other. Yet the world is still arguing about Islam's teachings. Is Islam peaceful? Does it commend violence? Does Islam respect "the other"? Does Islam abuse women? Is Islam anti-Semitic? Does Islam teach the Torment of the Grave? Does Islam recommend the beating of wives? Do Muslim Scriptures commend Temporary Marriage of Pleasure? Did Zayd divorce Zaynab because he had no further need of her? All these questions are easy to settle for anyone who can read Islamic Scripture in Arabic. The author of this book is such a person. However, to answer all these questions in the affirmative would do the image of Islam much damage in the West, where Islam is keen to present a polished image, especially in the light of much violence committed in its name against westerners. Muslim leaders, and their allies in the West, have popularised a distinction between Muslims and Islamists, in order to distance Islam from thousands of heinous Muslim crimes such as the Charlie Hebdo massacre. Are the English translations of the Qur'an faithful to the original Arabic? Or are they part of the charm offensive Muslim Petro-dollars have financed for years, through sponsorship of university departments of Islamic studies, investing in western media and publishing, building Islamic centres and financing Islamic societies and pressure groups throughout the West. This work gives English readers the ability to access the original Arabic of the Qur'an and hadith, and see the true face of Islam, without its face powder. It is hoped that this work will assist free thinkers to form their own opinion of Islam, based on the true Qur'an, without interference from Muslim propaganda or any agenda driven discourses. Corpus-based translation studies has become a major paradigm

and research methodology and has investigated a wide variety of topics in the last two decades. The contributions to this volume add to the range of corpus-based studies by providing examples of some less explored applications of corpus analysis methods to translation research. They show that the area keeps evolving as it constantly opens up to different frameworks and approaches, from appraisal theory to process-oriented analysis, and encompasses multiple translation settings, including (indirect) literary translation, machine (assisted)-translation and the practical work of professional legal translators. The studies included in the volume also expand the range of application of corpus applications in terms of the tools used to accomplish the research tasks outlined. A New York Times Notable Book for 2011 One of The Economist's 2011 Books of the Year People speak different languages, and always have. The Ancient Greeks took no notice of anything unless it was said in Greek; the Romans made everyone speak Latin; and in India, people learned their neighbors' languages—as did many ordinary Europeans in times past (Christopher Columbus knew Italian, Portuguese, and Castilian Spanish as well as the classical languages). But today, we all use translation to cope with the diversity of languages. Without translation there would be no world news, not much of a reading list in any subject at college, no repair manuals for cars or planes; we wouldn't even be able to put together flat-pack furniture. *Is That a Fish in Your Ear?* ranges across the whole of human experience, from foreign films to philosophy, to show why translation is at the heart of what we do and who we are. Among many other things, David Bellos asks: What's the difference between translating unprepared natural speech and translating *Madame Bovary*? How do you translate a joke? What's the difference between a native tongue and a learned one? Can you translate between any pair of languages, or only between some? What really goes on when world leaders speak at the UN? Can machines ever replace human translators, and if not, why? But the biggest question Bellos asks is this: How do we ever really know that we've understood what anybody else says—in our own language or in another? Surprising, witty, and written with great *joie de vivre*, this book is all about how we comprehend other people and shows us how, ultimately, translation is another name for the human condition. The use of language corpora as a resource in linguistics and language-related disciplines is now well-established. One of the many fields where the impact of corpora has been growing in recent years is translation, both at a descriptive and a practical level. The papers in this

volume, which grew out of presentations at the conference Cult2k (Bertinoro, Italy, 2000), the second in the series *Corpus Use and Learning to Translate*, are principally concerned with the use of corpora as resources for the translator and as teaching and learning aids in the context of the translation classroom. This book offers a cross-section of research by some leading scholars in the field, who offer accounts of first-hand experience and theoretical insights into the various ways of building and using appropriate corpora in translation teaching, for the benefit of teachers and learners alike. The various contributions provide a rich source of inspiration for other researchers and practitioners concerned with 'corpora in translator education'. Contributors include Stig Johansson, Tony McEnerly, Kirsten Malmkjaer, Jennifer Pearson, Lynne Bowker, Krista Varantola, Belinda Maia and a number of other scholars. " Through close readings of select stories and novels by well-known writers from different literary traditions, *Fictional Translators* invites readers to rethink the main clichés associated with translations. Rosemary Arrojo shines a light on the transformative character of the translator's role and the relationships that can be established between originals and their reproductions, building her arguments on the basis of texts such as the following: Cortázar's "Letter to a Young Lady in Paris" Walsh's "Footnote" Wilde's *The Picture of Dorian Gray* and Poe's "The Oval Portrait" Borges's "Pierre Menard, Author of the Quixote," "Funes, His Memory," and "Death and the Compass" Kafka's "The Burrow" and Kosztolányi's Kornél Esti Saramago's *The History of the Siege of Lisbon* and Babel's "Guy de Maupassant" Scliar's "Footnotes" and Calvino's *If on a Winter's Night a Traveler* Cervantes's *Don Quixote* *Fictional Translators* provides stimulating material for reflection not only on the processes associated with translation as an activity that inevitably transforms meaning, but, also, on the common prejudices that have underestimated its productive role in the shaping of identities. This book is key reading for students and researchers of literary translation, comparative literature and translation theory. This book provides an overview of how comparable corpora can be used to overcome the lack of parallel resources when building machine translation systems for under-resourced languages and domains. It presents a wealth of methods and open tools for building comparable corpora from the Web, evaluating comparability and extracting parallel data that can be used for the machine translation task. It is divided into several sections, each covering a specific task such as building,

processing, and using comparable corpora, focusing particularly on under-resourced language pairs and domains. The book is intended for anyone interested in data-driven machine translation for under-resourced languages and domains, especially for developers of machine translation systems, computational linguists and language workers. It offers a valuable resource for specialists and students in natural language processing, machine translation, corpus linguistics and computer-assisted translation, and promotes the broader use of comparable corpora in natural language processing and computational linguistics. The survival of ancient Greek historiography is largely due to its preservation by Byzantine copyists and scholars. This process entailed selection, adaptation, and commentary, which shaped the corpus of Greek historiography in its transmission. By investigating those choices, Kaldellis enables a better understanding of the reception and survival of Greek historical writing. *Byzantine Readings of Ancient Historians* includes translations of texts written by Byzantines on specific ancient historians. Each translated text is accompanied by an introduction and notes to highlight the specific context and purpose of its composition. In order to present a rounded picture of the reception of Greek historiography in Byzantium, a wide range of genres have been considered, such as poems and epigrams, essays, personalized scholia, and commentaries. *Byzantine Readings of Ancient Historians* is therefore an important resource for scholars and students of ancient history. Corpora are among the hottest issues in translation studies affecting both pure and applied realms of the discipline. As for pure translation studies, corpora have done their part through contributions to the studies on translational language and translation universals. Yet, their recent contribution is within the borders of applied translation studies, i.e. translator training and translation aids. The former is the major focus of the present book. The present book in fact aims at providing readers with comprehensive information about corpora in translation studies in general, and corpora in translator education in particular. It further offers researchers and practitioners a comprehensive and up-to-date survey of studies done on corpora in translator education and provides a rich source of information on pros and cons of using different types of corpora as translation aids in the context of translation classrooms. Translation technologies are moulded by and impact upon humans in all sorts of ways. This state-of-the-art volume looks at translation technologies from the point of view of the human users – as trainee, professional or volunteer translators,

or as end users of translations produced by machines. Covering technologies from machine translation to online collaborative platforms, and practices from 'traditional' translation to crowdsourced translation and subtitling, this volume takes a critical stance, questioning both utopian and dystopian visions of translation technology. In eight chapters, the authors propose ideas on how technologies can better serve translators and end users of translations. The first four chapters explore how translators – in various contexts and with widely differing profiles – use and feel about translation technologies as they currently stand, while the second four chapters focus on the future: on anticipating needs, identifying emerging possibilities, and defining interventions that can help to shape translation practice and research. Drawing on a range of theories from cognitive to social and psychological, and with empirical evidence of what the technologization of the workplace means to translators, *Human Issues in Translation Technology* is key reading for all those involved in translation and technology, translation theory and translation research methods. This edited thematic collection features latest developments of discourse analysis in translation and interpreting studies. It investigates the process of how cultural and ideological intervention is conducted in translation and interpreting using a wide array of discourse analysis and systemic functional linguistic approaches and drawing on empirical data from the Chinese context. The book is divided into four main sections: I. uncovering positioning and ideology in interpreting and translation, II. linking linguistic approach with socio-cultural interpretation, III. discourse analysis into news translation and IV. analysis of multimodal and intersemiotic discourse in translation. The different approaches to discourse analysis provide a much-needed contribution to the field of translation and interpreting studies. This combination of discourse analysis and corpus analysis demonstrates the interconnectedness of these fields and offers a rich source of conceptual and methodological tools. This book will appeal to scholars and research students in translation and interpreting studies, cross-linguistic discourse analysis and Chinese studies. Punctuated by thoughtful wit, this engaging volume of essays offers Jeffrey M. Green's personal and theoretical ruminations on the profession of translation. Green begins many of the essays by relating the specific techniques and problems associated with translating from Hebrew texts. From this intimate perspective, he forges wise reflections on such subjects as identifying and preserving the writer's voice, the cultural significance

of translations and their contents, the research and travel that are part of a translator's everyday life, and the frequent puzzles associated with the craft. Green combines a contemporary frankness about the financial, practical, theoretical, and ethical aspects of translation with an aspiration to write “like a good literary critic of the old school”—considering the moral and spiritual implications of the translation as well as its content. *Thinking Through Translation* shows us, with eloquent honesty, that translation is a delicate art and skill, and presents the trade as a way of attaining insight about history, the world, and oneself. *The Handbook of Translation and Cognition* is a pioneering, state-of-the-art investigation of cognitive approaches to translation and interpreting studies (TIS). Offers timely and cutting-edge coverage of the most important theoretical frameworks and methodological innovations. Contains original contributions from a global group of leading researchers from 18 countries. Explores topics related to translator and workplace characteristics including machine translation, creativity, ergonomic perspectives, and cognitive effort, and competence, training, and interpreting such as multimodal processing, neurocognitive optimization, process-oriented pedagogies, and conceptual change. Maps out future directions for cognition and translation studies, as well as areas in need of more research within this dynamic field. *The Routledge Handbook of Translation, Feminism and Gender* provides a comprehensive, state-of-the-art overview of feminism and gender awareness in translation and translation studies today. Bringing together work from more than 20 different countries – from Russia to Chile, Yemen, Turkey, China, India, Egypt and the Maghreb as well as the UK, Canada, the USA and Europe – this Handbook represents a transnational approach to this topic, which is in development in many parts of the world. With 41 chapters, this book presents, discusses, and critically examines many different aspects of gender in translation and its effects, both local and transnational. Providing overviews of key questions and case studies of work currently in progress, this Handbook is the essential reference and resource for students and researchers of translation, feminism, and gender. *The Routledge Handbook of Translation and Politics* presents the first comprehensive, state of the art overview of the multiple ways in which ‘politics’ and ‘translation’ interact. Divided into four sections with thirty-three chapters written by a roster of international scholars, this handbook covers the translation of political ideas, the effects of political structures on translation and interpreting, the politics

of translation and an array of case studies that range from the Classical Mediterranean to contemporary China. Considering established topics such as censorship, gender, translation under fascism, translators and interpreters at war, as well as emerging topics such as translation and development, the politics of localization, translation and interpreting in democratic movements, and the politics of translating popular music, the handbook offers a global and interdisciplinary introduction to the intersections between translation and interpreting studies and politics. With a substantial introduction and extensive bibliographies, this handbook is an indispensable resource for students and researchers of translation theory, politics and related areas. Scholars have long highlighted the links between translating and (re)writing, increasingly blurring the line between translations and so-called 'original' works. Less emphasis has been placed on the work of writers who translate, and the ways in which they conceptualize, or even fictionalize, the task of translation. This book fills that gap and thus will be of interest to scholars in linguistics, translation studies and literary studies. Scrutinizing translation through a new lens, Judith Woodsworth reveals the sometimes problematic relations between author and translator, along with the evolution of the translator's voice and visibility. The book investigates the uses (and abuses) of translation at the hands of George Bernard Shaw, Gertrude Stein and Paul Auster, prominent writers who bring into play assorted fictions as they tell their stories of translations. Each case is interesting in itself because of the new material analysed and the conclusions reached. Translation is seen not only as an exercise and fruitful starting point, it is also a way of paying tribute, repaying a debt and cementing a friendship. Taken together, the case studies point the way to a teleology of translation and raise the question: what is translation for? Shaw, Stein and Auster adopt an authorial posture that distinguishes them from other translators. They stretch the boundaries of the translation proper, their words spilling over into the liminal space of the text; in some cases they hijack the act of translation to serve their own ends. Through their tales of loss, counterfeit and hard labour, they cast an occasionally bleak glance at what it means to be a translator. Yet they also pay homage to translation and provide fresh insights that continue to manifest themselves in current works of literature. By engaging with translation as a literary act in its own right, these eminent writers confer greater prestige on what has traditionally been viewed as a subservient art. The Routledge Handbook of Translation and Ethics offers

a comprehensive overview of issues surrounding ethics in translating and interpreting. The chapters chart the philosophical and theoretical underpinnings of ethical thinking in Translation Studies and analyze the ethical dilemmas of various translatorial actors, including translation trainers and researchers. Authored by leading scholars and new voices in the field, the 31 chapters present a wide coverage of emerging issues such as increasing technologization of translation, posthumanism, volunteering and activism, accessibility and linguistic human rights. Many chapters provide the first extensive overview of the topic or present new takes on established areas. The book is divided into four parts, with the first covering the most influential ethical theories. Part II takes the perspective of agents in different contexts and the ethical dilemmas they face, while Part III takes a critical look at central institutions structuring and controlling ethical behaviour. Finally, Part IV focuses on special issues and new challenges, and signals new directions for further study. This handbook is an indispensable resource for all students and researchers of translation and ethics within translation and interpreting studies, multilingualism and comparative literature. Leonardi analyses and evaluates the problems that may arise from ideology-driven shifts in the translation process as a result of gender differences. First she offers a theoretical background, draws up an analytic checklist of linguistic tools and states the main hypothesis, then she tests the hypothesis with four empirical analyses. This edited volume covers an array of the most relevant topics in translation cognition, taking different approaches and using different research tools. It explores theoretical and methodological issues using case studies and examining their practical and pedagogical implications. It is a valuable resource for translation studies scholars, graduate students and those interested in translation and translation training, enabling them to conceptualize translation cognition, in order to enhance their research methods and designs, manage innovations in their translation training or simply understand their own translation behaviours. Exploring Translation Theories presents a comprehensive analysis of the core contemporary paradigms of Western translation theory. The book covers theories of equivalence, purpose, description, uncertainty, localization, and cultural translation. This second edition adds coverage on new translation technologies, volunteer translators, non-linear logic, mediation, Asian languages, and research on translators' cognitive processes. Readers are encouraged to explore the various theories and consider their strengths,

weaknesses, and implications for translation practice. The book concludes with a survey of the way translation is used as a model in postmodern cultural studies and sociologies, extending its scope beyond traditional Western notions. Features in each chapter include: An introduction outlining the main points, key concepts and illustrative examples. Examples drawn from a range of languages, although knowledge of no language other than English is assumed. Discussion points and suggested classroom activities. A chapter summary. This comprehensive and engaging book is ideal both for self-study and as a textbook for Translation theory courses within Translation Studies, Comparative Literature and Applied Linguistics. Empirical research is carried out in a cyclic way: approaching a research area bottom-up, data lead to interpretations and ideally to the abstraction of laws, on the basis of which a theory can be derived. Deductive research is based on a theory, on the basis of which hypotheses can be formulated and tested against the background of empirical data. Looking at the state-of-the-art in translation studies, either theories as well as models are designed or empirical data are collected and interpreted. However, the final step is still lacking: so far, empirical data has not lead to the formulation of theories or models, whereas existing theories and models have not yet been comprehensively tested with empirical methods. This publication addresses these issues from several perspectives: multi-method product- as well as process-based research may gain insights into translation as well as interpreting phenomena. These phenomena may include cognitive and organizational processes, procedures and strategies, competence and performance, translation properties and universals, etc. Empirical findings about the deeper structures of translation and interpreting will reduce the gap between translation and interpreting practice and model and theory building. Furthermore, the availability of more large-scale empirical testing triggers the development of models and theories concerning translation and interpreting phenomena and behavior based on quantifiable, replicable and transparent data. This book provides an overview of how comparable corpora can be used to overcome the lack of parallel resources when building machine translation systems for under-resourced languages and domains. It presents a wealth of methods and open tools for building comparable corpora from the Web, evaluating comparability and extracting parallel data that can be used for the machine translation task. It is divided into several sections, each covering a specific task such as building,

processing, and using comparable corpora, focusing particularly on under-resourced language pairs and domains. The book is intended for anyone interested in data-driven machine translation for under-resourced languages and domains, especially for developers of machine translation systems, computational linguists and language workers. It offers a valuable resource for specialists and students in natural language processing, machine translation, corpus linguistics and computer-assisted translation, and promotes the broader use of comparable corpora in natural language processing and computational linguistics. Project Report from the year 2006 in the subject English Language and Literature Studies - Other, grade: 1,3, University of Frankfurt (Main) (Institut für England und Amerikastudien), course: Translation and Intercultural Communication, 26 entries in the bibliography, language: English, abstract: This paper will give a general overview of the venture that is machine translation with particular focus on linguistic aspects. It will display history of MT and will deal with some of the major issues in the realisation of MT like the difficulty of translating prepositions or integrating semantics, as well as the importance of real world knowledge. To illustrate these difficulties with examples on a basic level, a practice test with a moderately complex translation engine provided by Google has been carried out and will be explained. Finally, I am going to introduce three of the largest and most powerful translation machines currently in use. I will also give a brief over-view of methods of MT. The aim of this paper is to show that the realisation of the primal idea of machine translation in its original sense, which was to perform translation without human intervention (except during the construction phase of the system), is still markedly far away at present and machines are still unlikely to take over the jobs of human translators. This volume gathers a wide range of voices in Translation Studies offering theoretical insights and practical ideas on how to tackle the cultural dimension in translation pedagogy. Issues range from curriculum planning to evaluation methods. The volume illustrates that the practice of 'translating culture' in the classroom goes beyond the translation of so-called realia. It also promotes the notion that translation teachers should foster transcultural awareness among their students, whereby intercultural differences and similarities may be negotiated and transcended in the act of translation. Julie Deconinck, Philippe Humble, Arvi Sepp and Helene Stengers are affiliated to the Applied Linguistics Department of the Vrije Universiteit Brussel, Belgium. The present

volume seeks to contribute some studies to the subfield of Empirical Translation Studies and thus aid in extending its reach within the field of translation studies and thus in making our discipline more rigorous and fostering a reproducible research culture. The Translation in Transition conference series, across its editions in Copenhagen (2013), Germersheim (2015) and Ghent (2017), has been a major meeting point for scholars working with these aims in mind, and the conference in Barcelona (2019) has continued this tradition of expanding the sub-field of empirical translation studies to other paradigms within translation studies. This book is a collection of selected papers presented at that fourth Translation in Transition conference, held at the Universitat Pompeu Fabra in Barcelona on 19–20 September 2019. Translation technologies are moulded by and impact upon humans in all sorts of ways. This state-of-the-art volume looks at translation technologies from the point of view of the human users – as trainee, professional or volunteer translators, or as end users of translations produced by machines. Covering technologies from machine translation to online collaborative platforms, and practices from ‘traditional’ translation to crowdsourced translation and subtitling, this volume takes a critical stance, questioning both utopian and dystopian visions of translation technology. In eight chapters, the authors propose ideas on how technologies can better serve translators and end users of translations. The first four chapters explore how translators – in various contexts and with widely differing profiles – use and feel about translation technologies as they currently stand, while the second four chapters focus on the future: on anticipating needs, identifying emerging possibilities, and defining interventions that can help to shape translation practice and research. Drawing on a range of theories from cognitive to social and psychological, and with empirical evidence of what the technologization of the workplace means to translators, *Human Issues in Translation Technology* is key reading for all those involved in translation and technology, translation theory and translation research methods. The *Routledge Handbook of Translation and Media* provides the first comprehensive account of the role of translation in the media, which has become a thriving area of research in recent decades. It offers theoretical and methodological perspectives on translation and media in the digital age, as well as analyses of a wide diversity of media contexts and translation forms. Divided into four parts with an editor introduction, the 33 chapters are written by leading international experts and provide a critical survey

of each area with suggestions for further reading. The Handbook aims to showcase innovative approaches and developments, bridging the gap between currently separate disciplinary subfields and pointing to potential synergies and broad research topics and issues. With a broad-ranging, critical and interdisciplinary perspective, this Handbook is an indispensable resource for all students and researchers of translation studies, audiovisual translation, journalism studies, film studies and media studies. This book examines the history of translation under European communism, bringing together studies on the Soviet Union, including Russia and Ukraine, Yugoslavia, Hungary, East Germany, Czechoslovakia, Bulgaria, and Poland. In any totalitarian regime maintaining control over cultural exchange is strategically important, so studying these regimes from the perspective of translation can provide a unique insight into their history and into the nature of their power. This book is intended as a sister volume to *Translation Under Fascism* (Palgrave Macmillan, 2010) and adopts a similar approach of using translation as a lens through which to examine history. With a strong interdisciplinary focus, it will appeal to students and scholars of translation studies, translation history, censorship, translation and ideology, and public policy, as well as cultural and literary historians of Eastern Europe, Soviet communism, and the Cold War period. *Machine Learning in Translation* introduces machine learning (ML) theories and technologies that are most relevant to translation processes, approaching the topic from a human perspective and emphasizing that ML and ML-driven technologies are tools for humans. Providing an exploration of the common ground between human and machine learning and of the nature of translation that leverages this new dimension, this book helps linguists, translators, and localizers better find their added value in a ML-driven translation environment. Part One explores how humans and machines approach the problem of translation in their own particular ways, in terms of word embeddings, chunking of larger meaning units, and prediction in translation based upon the broader context. Part Two introduces key tasks, including machine translation, translation quality assessment and quality estimation, and other Natural Language Processing (NLP) tasks in translation. Part Three focuses on the role of data in both human and machine learning processes. It proposes that a translator's unique value lies in the capability to create, manage, and leverage language data in different ML tasks in the translation process. It outlines new knowledge and skills that need to be incorporated into traditional

translation education in the machine learning era. The book concludes with a discussion of Human-centered Machine Learning in Translation, stressing the need to empower translators with ML knowledge, through communication with ML users, developers, and programmers, and with opportunities for continuous learning. This accessible guide is designed for current and future users of ML technologies in localization workflows, including students on courses in translation and localization, language technology, and related areas. It supports the professional development of translation practitioners, so that they can fully utilize ML technologies and design their own human-centered ML-driven translation workflows and NLP tasks. This collection of scholarly articles asks the question How useful is translation technology? Pointing to the need for a widely used and reliable way to test the efficiency of language translation programs, the presenters show that commercial tools such as translation memories and translation workbenches are popular, and their developers find them useful in terms of productivity, consistency, or quality. However, these claims are rarely proven using objective comparative studies, and this group describes several new statistical approaches to more rigorous evaluation methods. -- Product Description. With unique personal insight, experience, and hard science, *Animals in Translations* is the definitive, groundbreaking work on animal behavior and psychology. Temple Grandin's professional training as an animal scientist and her history as a person with autism have given her a perspective like that of no other expert in the field of animal science. Grandin and coauthor Catherine Johnson present their powerful theory that autistic people can often think the way animals think—putting autistic people in the perfect position to translate “animal talk.” Exploring animal pain, fear, aggression, love, friendship, communication, learning, and even animal genius, Grandin is a faithful guide into their world. *Animals in Translation* reveals that animals are much smarter than anyone ever imagined, and Grandin, standing at the intersection of autism and animals, offers unparalleled observations and extraordinary ideas about both. Celebrated practitioners speak on the creative, critical, political, and historical aspects of their work. This book presents cutting-edge research in translation studies, offering stimulating discussions on translation and providing fresh perspectives on the field. *Papers in Translation Studies* features a selection of papers originally authored for this volume, addressing a variety of issues from different points of view and offering interesting contributions to the

critical literature of the field. The volume provides useful resources that will be of great benefit for academics, students and practitioners. The contributions to this book promote research on translation theory and practice, and suggest ways of dealing with translation problems. The volume chapters are written by researchers from around the world, and consider various different languages and contexts. Areas of investigation include contrastive linguistics and translation, corpus-based translation studies, natural language processing, machine translation, and translator training. Written with the student and interested public in mind, Truth in Translation aims to explain what is involved and what is at stake in Bible translation. It begins with brief treatments of the background to the Bible and its translation, the various approaches to translation, and the specific origins of nine translation versions in wide use in the English-speaking world today. It then proceeds to compare those versions on nine points of translation, ranging from individual terms, to difficult passages, to whole categories of grammar. The book serves to inform readers of the forces at work shaping the meaning of the Bible, to help in their selection of Bible translations, and to act as a critical catalyst for the improvement of Bible translations through more careful attention to the risk of bias in the translation process. Moreover, many items in the reference lists are hyperlinked to the TSB, where the user can find an abstract of a publication. All articles (between 500 and 6000 words) are written by specialists in the different subfields and are peer-reviewed. Last but not least, the usability, accessibility and flexibility of the "HTS" depend on the commitment of people who agree that Translation Studies does matter. All users are therefore invited to share their feedback. Any questions, remarks and suggestions for improvement can be sent to the editorial team
