 access to additional assets or markets most derivatives are traded over the counter otc however
 some of the contracts including options and web a function that has infinitely many derivatives is
 called infinitely differentiable or smooth on the real line every polynomial function is infinitely
 differentiable by standard differentiation rules if a polynomial of degree n is differentiated n times
 then it becomes a constant function all of its subsequent derivatives are identically zero web $f(x) \lim_{\Delta x \rightarrow 0} \frac{f(x + \Delta x) - f(x)}{\Delta x}$ the derivative of f equals the limit as Δx goes to zero of $\frac{f(x + \Delta x) - f(x)}{\Delta x}$ or
 sometimes the derivative is written like this explained on derivatives as $\frac{dy}{dx}$ $\frac{dy}{dx} = f'(x)$ the
 process of web to calculate derivatives start by identifying the different components i e multipliers
 and divisors derive each component separately carefully set the rule formula and simplify if you are
