Ideas, Strategies, and Scenarios in Music Information Literacy offers expert guidance on planning and implementing information literacy instruction programs in a wide range of instructional situations and theoretical frameworks. The result is an exploration of various structures for engaging music students as reflective and engaged participants in today's complex

information environments. This rich time of change brings renewed interest in information literacy instruction and developing new skill sets for the shifting paradigms in librarianship, as recent educational reform movement shifts information literacy away from competency standards to a more complex set of core concepts associated with metaliteracy and cognition. This transformed world requires library environments to be inclusive with the resulting cultural evolution prompting a re-examination of how best to serve a population that represents diversity of all kinds: sexual, political, disabilities, national origin, socioeconomic, religion, linguistic, body size, age, and other dimensions. As music and performing arts librarians revisit information literacy instruction, this essential book serves as a guide to creating and maintaining quality instruction programs. Music Information Literacy includes a bibliography of a critical articles, books, association documents, and government data on information literacy in academic library instruction, intended to supplement the chapters on instructional theories and techniques, instructional modes, and building relationships and collaborations presented in this book. If you want to write a book that's going to sell to both publishers and readers, you need to know how to produce a marketable work and help it become successful. It starts the moment you have an idea. That's when you begin thinking about the first elements of the business plan that will make your project the best it can be. The reality is that you don't want to spend time and energy writing a book that will never get read. The way to avoid that is to create a business plan for your book, and evaluate it (and yourself) through the same lens that an agent or acquisitions editor would. The Author Training Manual will show you how to get more creative and start looking at your work with those high standards in mind. Whether you're writing fiction or non-fiction, or intend to publish traditionally or self-publish, author Nina Amir will teach you how to conduct an effective competitive analysis for your work and do a better job at delivering the goods to readers than similar books that are already on the shelf. Packed with step-by-step instructions, idea evaluations, sample

business plans, editor and agent commentaries, and much more, *The Author Training Manual* provides the information you need to transform from aspiring writer to career author. *At Last! A Beginner's Guide to Newborn Baby Technology* You've programmed your DVR, you've installed a wireless Internet connection, you can even check Facebook on your cell phone. But none of this experience will prepare you for the world's biggest technological marvel: a newborn baby. Through step-by-step instructions and helpful schematic diagrams, *The Baby Owner's Manual* explores hundreds of frequently asked questions: What's the best way to swaddle a baby? How can I make my newborn sleep through the night? When should I bring the baby to a doctor for servicing? Whatever your concerns, you'll find the answers here—courtesy of celebrated pediatrician Dr. Louis Borgenicht and his son, Joe Borgenicht. Together, they provide plenty of useful advice for anyone who wants to learn the basics of childcare. *Money for the Asking* explores the basics of fundraising for music library professionals. Music libraries face many challenges today, including shrinking budgets. Fundraising is one way to increase a library's resources, but few books address fundraising opportunities specifically for music libraries. In this concise volume Peter Munstedt provides practical advice for music librarians who want to initiate fundraising. Based on his depth of experience, the author explains the importance of promoting a library's needs, which can be critical in establishing fundraising efforts. Working with individual donors is essential for any fundraising program. The book differentiates four essential steps that development professionals employ when working with donors, including identification, cultivation, solicitation, and stewardship. There is also an explanation of the various types of donations, such as gifts in kind, monetary gifts, endowments, and planned giving. Obtaining resources through grants is another significant aspect of fundraising. The book covers corporation, foundation, and government grants within the context of music libraries. Other methods of raising money are also described, including several kinds of fundraising events, such as benefit concerts, book sales, as well as other public and private events. While encouraging music libraries to pursue fundraising, the author also cautions about several subtle issues that consist of hidden costs, internal politics, and ethical concerns. This book reveals principles in the professional development world as seen through the eyes of a music librarian. The author explains real-life experiences in a music library setting, including case studies from his library. Also provided are examples of fundraising web pages from various other music libraries. The book reveals the positive effects and actual benefits that fundraising can bring to a music

library. Money really is there for the asking. At Last! A Beginner's Guide to Home Technology Water stains on your ceiling. Dents and cracks in your drywall. "For three years, Bill Westheimer photographed 150 portraits in New York, New Jersey, and Scotland for The Manual Project. This book is the culmination of his investigation into the personalities of hands."-- While scholars have been developing valuable research on race and racism for decades, this work does not often reach the beginning college student or the general public, who rarely learn a basic history of race and racism. If we are to dismantle systemic racism and create a more just society, people need a place to begin. This accessible, introductory, and interdisciplinary guide can be one such place. Grounded in critical race theory, this book uses the metaphor of the Racism Machine to highlight that race is a social construct and that racism is a system of oppression based on invented racial categories. It debunks the false ideology that race is biological. As a manual, this book presents clear instructions for understanding the history of race, including whiteness, starting in colonial America, where the elite created a hierarchy of racial categories to maintain their power through a divide-and-conquer strategy. As a toolbox, this book provides a variety of specific action steps that readers can take once they have developed a foundational understanding of the history of white supremacy, a history that includes how the Racism Machine has been recalibrated to perpetuate racism in a supposedly "post-racial" era. Provides information on stylistic aspects of research papers, theses, and dissertations, including sections on writing fundamentals, MLA documentation style, and copyright law. However, individuals are responsible for their own actions, which they can examine and control through rigorous self-discipline. By putting into practice the ninety-three wise instructions that make up The Art of Living, readers learn to successfully meet the challenges of everyday life.
