**European language policy** Mar 18 2022 Die Beiträge dieses Sammelbandes, die auf eine gleichnamige Konferenz im Juni 2002 an der Universität Würzburg zurückgehen, behandeln die Probleme der Europäischen Sprachenpolitik aus verschiedenen Perspektiven. Zum einen wird die Europäische Dimension dieser für die Europäische Union hochbrisanten Frage aus dem Blickwinkel der Europäischen Kommission und der Mitgliedsstaaten betrachtet. Zum anderen werden die regionalen Aspekte und die Funktionen der Sprache, insbesondere des Englischen, auf der kommunikativen Ebene, der bildungspolitischen, juristischen, arbeitspraktischen und sprachenpolitischen Ebene analysiert. Insbesondere werden auch neueste neurophysiologische und behavioristische Forschungsergebnisse mit Bezug auf den Spracherwerb einbezogen. Auch der frühe Fremdspracherwerb wird im Gegensatz zum Mutterspracherwerb ausführlich behandelt. Den Band schließt die "Würzburger Erklärung zur Europäischen Sprachenpolitik" ab, in der sich die Experten einvernehmlich für den Ausbau der Plurilingualität in der Europäischen Union aussprechen. Den Beiträgen, die vornehmlich in der englischen, aber auch in der deutschen und französischen Sprache abgefasst sind, sind kurze Zusammenfassungen in den jeweils anderen Sprachen beigefügt, so dass den Lesern auf jeden Fall die Hauptgedanken der Beiträge nahegebracht werden.

Mathematics Education and Technology-Rethinking the Terrain Aug 31 2020 Mathematics Education and Technology-Rethinking the Terrain revisits the important 1985 ICMI Study on the influence of computers and informatics on mathematics and its teaching. The focus of this book, resulting from the seventeenth Study led by ICMI, is the use of digital technologies in mathematics teaching and learning in countries across the world. Specifically, it focuses on cultural diversity and how this diversity impinges on the use of digital technologies in mathematics teaching and learning. Within this focus, themes such as mathematics and mathematical practices; learning and assessing mathematics with and through digital technologies; teachers and teaching; design of learning environments and curricula; implementation of curricula and classroom practice; access, equity and socio-cultural issues; and connectivity and virtual networks for learning, serve to organize the study and bring it coherence. Providing a state-of-the-art view of the domain with regards to research, innovating practices and technological development, Mathematics Education and Technology-Rethinking the Terrain is of interest to researchers and all those interested in the role that digital technology plays in mathematics education.

**Urban Europe** Jan 16 2022 Statistical information is an important tool for analysing changing patterns of urban development and the impact that policy decisions have on life in our cities, towns and suburbs. Urban Europe - statistics on cities, towns and suburbs provides detailed information for a number of territorial typologies that can be used to paint a picture of urban developments and urban life in the EU Member States, as well as EFTA and candidate countries. Each chapter presents statistical information in the form of maps, tables and figures, accompanied by a description of the policy context and a set of main findings. The publication is broken down into two parts : the first treats topics under the heading of city and urban developments, while the second focuses on the people in cities and the lives they lead. Overall there are 12 main chapters, covering : the urban paradox, patterns of urban and city developments, the dominance of capital cities, smart cities, green cities, tourism and culture in cities, living in cities, working in cities, housing in cities, foreign-born persons in cities, poverty and social exclusion in cities, as well as satisfaction and the quality of life in cities.

**Advanced Calculus** Dec 03 2020 "Advanced Calculus is intended as a text for courses that furnish the backbone of the student's undergraduate education in mathematical analysis. The goal is to rigorously present the fundamental concepts within the context of illuminating examples and stimulating exercises. This book is self-contained and starts with the creation of basic tools using the completeness axiom. The continuity, differentiability, integrability, and power series representation properties of functions of a single variable are established. The next few chapters describe the topological and metric properties of Euclidean space. These are the basis of a rigorous treatment of differential calculus (including the Implicit Function Theorem and Lagrange Multipliers) for mappings between Euclidean spaces and integration for functions of several real variables."--pub. desc.

**Computer Aided Assessment of Mathematics** Sep 12 2021 Assessment is a key driver in mathematics education. This book examines computer aided assessment (CAA) of mathematics in which computer algebra systems (CAS) are used to establish the mathematical properties of expressions provided by students in response to questions. In order to automate such assessment, the relevant criteria must be encoded and, in articulating precisely the desired criteria, the teacher needs to think very carefully about the goals of the task. Hence CAA acts as a vehicle to examine assessment and mathematics education in detail and from a fresh perspective. One example is how it is natural for busy teachers to set only those questions that can be marked by hand in a straightforward way, even though the constraints of paper-based formats restrict what they do and why. There are other kinds of questions, such as those with non-unique correct answers, or where assessing the properties requires the marker themselves to undertake a significant computation. It is simply not sensible for a person to set these to large groups of students when marking by hand. However, such questions have their place and value in provoking thought and learning. This book, aimed at teachers in both schools and universities, explores how, in certain cases, different question types can be automatically assessed. Case studies of existing systems have been included to illustrate this in a concrete and practical way.
